Incredible indeterminate producer of bright red grape tomatoes. Tomatoes from this variety pack a delicious, sweet taste. Very vigorous and will mature extremely early. Plants are strong, fitting best for medium to higher technology greenhouse culture, however, it has adapted well to lower technology. Tommasino has a great disease package that includes resistance to many viruses. The yield on this variety is outstanding, and the plants continue to yield even after multiple harvests. It is easily one of the best yielders on the market in this segment. Fruits are also resistant to cracking and are long shelf life.
